Presents current statistical data on economic activity. This edited volume is the first archival based historical investigation on the liberalization measures taken in various countries in the financial sector in the decades following the Bretton Woods system, from a comparative and a global perspective. The experimental practices of a group of artists in the former East Germany upends assumptions underpinning Western art's postwar histories. In *Paper Revolutions*, Sarah James offers a radical rethinking of experimental art in the former East Germany (the GDR). Countering conventional accounts that claim artistic practices in the GDR were isolated and conservative, James introduces a new narrative of neo-avantgarde practice in the Eastern Bloc that subverts many of the assumptions underpinning Western art's postwar histories. She grounds her argument in the practice of four artists who, uniquely positioned outside academies, museums, and the art market, as these functioned in the West, created art in the blind spots of state censorship. They championed ephemeral practices often marginalized by art history: postcards and letters, maquettes and models, portfolios and artists' books. Through their "lived modernism," they produced bodies of work animated by the radical legacies of the interwar avant-garde. James examines the work and daily practices of the constructivist graphic artist, painter, and sculptor Hermann Glöckner; the experimental graphic artist and concrete and sound poet Carlfriedrich Claus; the mail artist, concrete poet, and conceptual artist Ruth Wolf-Rehfeldt; and the mail artist, "visual poet," and installation artist Karla Sachse. She shows that all of these artists rejected the idea of art as a commodity or a rarefied object, and instead believed in the potential of art to create collectivized experiences and change the world. James argues that these artists, entirely neglected by Western art history, produced some of the most significant experimental art to emerge from Germany during the Cold War. In this sequel to his highly acclaimed Bureaucratic Reform in the Ottoman Empire, Carter Findley shifts focus from the organizational aspects of administrative reform and development to the officials themselves. A study in social history and its cultural and economic ramifications, Findley's new book critically reassesses Ottoman accomplishments and failures in turning an archaic scribal corps into an effective civil service. Combining scrutiny of well-documented individuals with analyses of large groups of officials, Findley considers how much the development of civil officialdom benefited Ottoman efforts to revitalize the state and protect its interests in an increasingly competitive world. Did reformers' initiatives in elite formation significantly broaden the social bases of officialdom and its capacity to represent Ottoman society? Did prospective officials profit from educational reform so as to achieve higher levels of qualification over the generations? How did cultural tensions of the reform era affect civil officials? To what extent did impersonal procedure and new ideas of professionalism supplant patronage and old scribal role concepts? How well did the state succeed in rewarding good service and protecting its officials against shifting economic conditions? The answers to such questions illuminate major issues of social integration and cultural change and clarify links between economic conditions and changing forms of political activism. Rivlin is one of the principal architects of nonlinear continuum mechanics: His work on the mechanics of rubber (in the 1940s and 50s) established the basis of finite elasticity theory. These volumes make most of his scientific papers available again and show the full scope and significance of his contributions. We know from the cost of the 2007-09 crisis that transnational finance does not operate in a realm removed from our everyday lives. Variegated Neoliberalism explains why its inequalities persist and how they undermine more social-minded policies towards finance in the EU. The book suggests that large financial groups capitalize on broader changes in capitalism and emerging assumptions about what benefits society at large. Those pushing these political-economic projects present policy change to cope with financial globalization as a new common sense. Macartney's argument then contests these assumptions through an analysis of the spatial relations of transnational actors, and the political claims made within finance and research communities. Rather than relying on umbrella concepts like 'transnational capitalist class', Variegated Neoliberalism emphasises the national-domestic foundations for transnationalization and what we commonly understand as neoliberalism. The book provides comparative analyses of global and European banking communities, and economic research centres, in the UK, France, and Germany. It explains the constellations underpinning the current neoliberal order in global finance, and the realms of possibility for challenges to it. New Perspectives in Book History verschijnt ter gelegenheid van het 14de SHARP congres dat in juli 2006 in Leiden en Den Haag plaatsvindt. De Society for the History of Authorship, Reading and Publishing (SHARP) is een internationale organisatie met wereldwijd zo'n 1200 leden. Het boek bevat 13 artikelen van zowel jonge als gevestigde boekhistorici uit Nederland en België. De onderwerpen lopen uiteen van de Leuvense Universiteit in de vroegmoderne tijd, 17de-eeuwse markramers en 20ste-eeuwse uitgeverijen tot de toepassing van modellen uit de bedrijfsgeschiedenis of uit de netwerkanalyse in het moderne boekhistorische onderzoek. In het boek is aandacht voor nieuwe ontdekkingen zoals boekenloterijen en voor de internationale positie van Nederland in het boekenvak. Tezamen vormen deze artikelen een staalkaart van het moderne boekhistorische onderzoek in de Lage Landen. Dempster-Shafer evidence theory, also called the theory of belief function, is widely used for uncertainty modeling and reasoning. However, when the size and number of focal elements are large, the evidence combination will bring a high computational complexity. To address this issue, various methods have been proposed including the implementation of more efficient combination rules and the simplifications or approximations of Basic Belief Assignments (BBAs). In this paper, a novel principle for approximating a BBA into a simpler one is proposed, which is based on the degree of non-redundancy for focal elements. Includes lists of orders, rules, bills etc. From the author's preface: Sublime Porte--there must be few terms more redolent, even today, of the fascination that the Islamic Middle East has long exercised over Western imaginations. Yet there must also be few Western minds that now know what this term refers to, or why it has any claim to attention. One present-day Middle East expert admits to having long interpreted the expression as a reference to Istanbul's splendid natural harbor. This individual is probably not unique and could perhaps claim to be relatively well informed. When the Sublime Porte still existed, Westerners who spent time in Istanbul knew the term as a designation for the Ottoman government, but few knew why the name was used, or what aspect of the Ottoman

government it properly designated. What was the real Sublime Porte? Was it an organization? A building? No more, literally, than a door or gateway? What about it was important enough to cause the name to be remembered? In one sense, the purpose of this book is to answer these questions. Of course, it will also do much more and will, in the process, move quickly onto a plane quite different from the exoticism just invoked. For to study the bureaucratic complex properly known as the Sublime Porte, and to analyze its evolution and that of the body of men who staffed it, is to explore a problem of tremendous significance for the development of the administrative institutions of the Ottoman Empire, the Islamic lands in general, and in some senses the entire non-Western world. This book will completely transform the standard interpretation of the Young Turk Revolution of 1908, a watershed event in the late Ottoman Empire and a key to the emergence of the modern nation-states in the Middle East and Balkans. Preparation for a Revolution is the first book on the Young Turk Revolution to draw on both the extensive memoirs and papers of the Young Turks and on the extensive diplomatic archives around the world. The author has plumbed not only the Ottoman Archives but collected documents from archives in Bonn, Berlin, Jerusalem, London, Paris, Rome, Athens, Sofia, Tirana, Bern, Geneva, Sarajevo, Cairo, Stockholm, and Tokyo. Breaking new ground, Hanioglu describes in detail how practical considerations led the Young Turks to sacrifice or alter many of their goals for social transformation. He tells a story rich in character and plot, and reveals the many factions and competing intellectual trends that marked this tumultuous period at the end of the Ottoman Empire. Preparation for a Revolution will prove indispensable to anyone working on the political, intellectual, and social history of the Ottoman Empire and of the states that were established on its ruins. • 10 Sample Papers in each subject • Strictly as per the latest Syllabus and pattern of NTA CUET (UG) - 2022 based on MCQs • Latest 2021 solved Paper (In only 6 Subjects- Mathematics/ Physics/ Chemistry/ Biology/General Awareness & Logical Reasoning) • On-Tips Notes for Quick Revision • Mind Maps for better learning • Tips to crack the CUET Exam in the first attempt The history of capitalism in Egypt has long been synonymous with cotton cultivation and dependent development. From this perspective, the British occupation of 1882 merely sealed the country's fate as a vast plantation for European textile mills. All but obscured in such accounts, however, is Egypt's emergence as a colonial laboratory for financial investment and experimentation. Egypt's Occupation tells for the first time the story of that financial expansion and the devastating crises that followed. Aaron Jakes offers a sweeping reinterpretation of both the historical geography of capitalism in Egypt and the role of political-economic thought in the struggles that raged over the occupation. He traces the complex ramifications and the contested legacy of colonial economism, the animating theory of British imperial rule that held Egyptians to be capable of only a recognition of their own bare economic interests. Even as British officials claimed that "economic development" and the multiplication of new financial institutions would be crucial to the political legitimacy of the occupation, Egypt's early nationalists elaborated their own critical accounts of boom and bust. As Jakes shows, these Egyptian thinkers offered a set of sophisticated and troubling meditations on the deeper contradictions of capitalism and the very meaning of freedom in a capitalist world.
