This case study examines the socioeconomic changes that took place between 1990 and 2000 in and around lands managed by the Bureau of Land Management (BLM) Coos Bay District in southwestern Oregon for purposes of assessing the effects of the Northwest Forest Plan (the Plan) on rural economies and communities in the Coos Bay region. The case study included an analysis of changes in the districts programs, as well as socioeconomic changes that occurred within the communities of Coos Bay, Myrtle Point, and Reedsport. Data were gathered during 2003 and 2004 from multiple sources including U.S. census databases, county and state criminal justice and economic development databases, and BLM annual reports. Interviews with BLM employees and community residents provided additional insights on how the Plan affected local socioeconomic conditions and the districts interactions with local communities. Even as the United

States enjoys a booming economy and historically low levels of unemployment, millions of Americans remain out of work or underemployed, and joblessness continues to plague many urban communities, racial minorities, and people with little education. In *Jobs for the Poor*, Timothy Bartik calls for a dramatic shift in the way the United States confronts this problem. Today, most efforts to address this problem focus on ways to make workers more employable, such as job training and welfare reform. But Bartik argues that the United States should put more emphasis on ways to increase the interest of employers in creating jobs for the poor—or the labor demand side of the labor market. Bartik's bases his case for labor demand policies on a comprehensive review of the low-wage labor market. He examines the effectiveness of government interventions in the labor market, such as Welfare Reform, the Earned Income Tax Credit, and Welfare-to-Work programs, and asks if having a job makes a person more employable. Bartik finds that public service employment and targeted employer wage subsidies can increase employment among the poor. In turn, job experience significantly increases the poor's long-run earnings by enhancing their skills and reputation with employers. And labor demand policies can avoid causing inflation or displacing other workers by targeting high-unemployment labor markets and persons who would otherwise be unemployed. Bartik concludes by proposing a large-scale labor demand program. One component of the program would give a tax credit to employers in areas of high unemployment. To provide disadvantaged workers with more targeted help, Bartik also recommends offering short-term subsidies to employers—particularly small businesses and nonprofit organizations—that hire people who otherwise would be

unlikely to find jobs. With experience from subsidized jobs, the new workers should find it easier to obtain future year-round employment. Although these efforts would not catapult poor families into the middle class overnight, Bartik offers a powerful argument that having a full-time worker in every household would help improve the lives of millions. *Jobs for the Poor* makes a compelling case that full employment can be achieved if the country has the political will and adopts policies that address both sides of the labor market.

Copublished with the W. E. Upjohn Institute for Economic Research This book, addressing mathematics educators, teacher-trainers and teachers, is published as a contribution to the endeavour of renewing the teaching of proof (and theorems) on the basis of historical-epistemological, cognitive and didactical considerations. The increasing amounts of money paid out in compensation to corporate executives have become the subject of a heated public policy debate on both sides of the Atlantic. This book covers a wide range of issues, including: corporate law and regulation in the area of corporate governance; and, prosperity and growth effects of compensation contracts. Do plummeting welfare caseloads and rising employment prove that welfare reform policies have succeeded, or is this success due primarily to the job explosion created by today's robust economy? With roughly one to two million people expected to leave welfare in the coming decades, uncertainty about their long-term prospects troubles many social scientists. *Finding Jobs* offers a thorough examination of the low-skill labor market and its capacity to sustain this rising tide of workers, many of whom are single mothers with limited education. Each chapter examines specific trends in the labor market to ask such questions as: How secure are these low-skill jobs, particularly

in the event of a recession? What can these workers expect in terms of wage growth and career advancement opportunities? How will a surge in the workforce affect opportunities for those already employed in low-skill jobs? Finding Jobs offers both good and bad news about work and welfare reform. Although the research presented in this book demonstrates that it is possible to find jobs for people who have traditionally relied on public assistance, it also offers cautionary evidence that today's strong economy may mask enduring underlying problems. Finding Jobs shows that the low-wage labor market is particularly vulnerable to economic downswings and that lower skilled workers enjoy less job stability. Several chapters illustrate why financial incentives, such as the Earned Income Tax Credit (EITC), are as essential to encouraging workforce participation as job search programs. Other chapters show the importance of including provisions for health insurance, and of increasing subsidies for child care to assist the large population of working single mothers affected by welfare reform. Finding Jobs also examines the potential costs of new welfare restrictions. It looks at how states can improve their flexibility in imposing time limits on families receiving welfare, and calls into question the cutbacks in eligibility for immigrants, who traditionally have relied less on public assistance than their native-born counterparts. Finding Jobs is an informative and wide-ranging inquiry into the issues raised by welfare reform. Based on comprehensive new data, this volume offers valuable guidance to policymakers looking to design policies that will increase work, raise incomes, and lower poverty in changing economic conditions. Cash and debt operations of the United States Treasury. This volume consists of a broad selection of studies on the applied economics of weight and

obesity. The chapters cover a wide spectrum of topics, and employ a variety of applied techniques across a range of countries. Some of the issues explored include: the relationship between childhood obesity and food insecurity; adolescent weight gain and social networks; obesity and happiness; the relationship between fast food and obesity; tobacco control; race and gender differences; and consumer health. This book is a compilation of articles originally published in the journals *Applied Economics* and *Applied Economics Letters*. The nation has made tremendous progress in reducing tobacco use during the past 40 years. Despite extensive knowledge about successful interventions, however, approximately one-quarter of American adults still smoke. Tobacco-related illnesses and death place a huge burden on our society. *Ending the Tobacco Problem* generates a blueprint for the nation in the struggle to reduce tobacco use. The report reviews effective prevention and treatment interventions and considers a set of new tobacco control policies for adoption by federal and state governments. Carefully constructed with two distinct parts, the book first provides background information on the history and nature of tobacco use, developing the context for the policy blueprint proposed in the second half of the report. The report documents the extraordinary growth of tobacco use during the first half of the 20th century as well as its subsequent reversal in the mid-1960s (in the wake of findings from the Surgeon General). It also reviews the addictive properties of nicotine, delving into the factors that make it so difficult for people to quit and examines recent trends in tobacco use. In addition, an overview of the development of governmental and nongovernmental tobacco control efforts is provided. After reviewing the ethical grounding of tobacco

control, the second half of the book sets forth to present a blueprint for ending the tobacco problem. The book offers broad-reaching recommendations targeting federal, state, local, nonprofit and for-profit entities. This book also identifies the benefits to society when fully implementing effective tobacco control interventions and policies. The primary objective of this book is to provide comprehensive descriptions and make comparative evaluations of each of the mental health systems of four Western, industrialized countries. The countries selected illustrate a continuum from a highly centralized and publicly financed, national health service in Great Britain to a predominantly decentralized and more privately financed market of mental health services in the United States. In between these two contrasting types are examples of national health services and insurance programs in Norway and Canada. Contributing experts from each country begin their chapters with an overview of the geographic, demographic, political, economic, and cultural contexts in which their mental health systems are situated. Thereafter, they (a) present national data to estimate the need for mental health services, (b) describe national mental health policies and programs designed to meet their population's need, (c) indicate how mental health services are organized and delivered, and (d) discuss how their system is financed and provided resources. A common chapter outline facilitates comparisons among all four systems on relevant evaluation criteria: (a) access and equity, (b) quality and efficacy, (c) cost and efficiency, (d) financing and fairness, (e) protection and participation, and (f) population relevance. In the final section of each chapter, the authors provide recommendations for improved performance of their mental health system. In the initial chapter, the editor provides an overview, introduces the

four countries selected, and defines the evaluation criteria applied by all contributing authors. The final two chapters address convergence and divergence among the four systems and provide recommendations for improvement and for future comparative studies. The intended audience includes mental health policymakers, program administrators and managers; teachers of graduate level courses relat This original and important book explores how the interaction between China and multinational enterprises (MNEs) has the potential to affect the future of the Chinese economy, the global economy, and international business. It examines the interaction of two of the most important forces affecting the development of the global economy in recent decades firstly the opening and massive growth of the Chinese economy, and secondly the rise in foreign direct investment per se and the consequent strategic restructuring of major MNEs. The expert contributors begin by investigating precisely how leading MNEs, with well-honed international practices and commitments, have drawn their subsidiaries in China into their established networks. They suggest that MNEs' operations are increasingly embedded in the growth and sustainability of the Chinese economy itself, rather than merely serving as a supply base for their global markets. The second part of the book examines the emergence of new MNEs from China itself. It shows how these MNEs are seen as integral to China's development, and how their ability to expand reflects strengths from China's growth as well as revealing the growing needs required for sustainability. This timely study will be of great interest not just to those following one of the world's key economies, but also to researchers and students of the fast-paced changes in international business strategy. Service-oriented architectures are of vital importance to enterprises maintaining order and service reputation with stakeholders, and by utilizing the latest technologies, advantage can be gained and time and effort saved. Enhancing Enterprise and Service-Oriented Architectures with Advanced Web Portal Technologies offers the latest research and development within the field, filled with case studies, research, methodologies, and frameworks from contributors around the world. In order to stay abreast of the cutting-edge research in the field, it is vital for academics and practitioners to stay involved and studied with the latest publications. This volume contains a wide range of subject matters, levels of technical expertise and development, and new technological advances within the field, and will serve as an excellent resource both as a handbook and a research manual. This book presents a unique overview of urban policy conducted by national authorities in the fifteen 'old' member states of the EU. Focussing on recent changes in the development of the larger cities and changes in policymaking by national authorities with respect to urban development, the book is structured around 15 'country chapters', written by national experts in the field of urban development. The book provides an up-to-date source of information, and will be of importance to anyone involved in the role and development of European cities as well as the formulation and delivery of associated national policies. In several developing countries, undernourishment is still prevalent while obesity and its related co-morbidities, including chronic non-communicable

diseases (NCDs) such as heart disease, diabetes and cancer, are emerging and contributing increasingly to morbidity and mortality. Several countries are now facing a double burden of malnutrition, i.e. caloric (energy) and micronutrient deficiencies and, at the same time, obesity and diet-related chronic diseases. This "nutrition transition" is associated with rapid economic development, urbanization and global changes, which lead to shifts towards a more energy dense diet, including more fat and sugar and more processed foods, and at the same time dramatic alterations in physical activity patterns and lifestyles. While infectious diseases and maternal and child undernutrition continue to take an enormous toll in lives and health worldwide, the rapid rise of NCDs represents one of the major health challenges to global development in the twenty-first century and threatens economic and social development of nations as well as the lives and health of millions globally. This publication explores the situation of the double burden of malnutrition in six geographically and culturally diverse case study countries and presents conclusions and recommendations from a follow-up workshop with the case study authors. This book discusses the application of Geospatial data, Geographic Information System (GIS) and Remote Sensing (RS) technologies in analysis and modeling of urban growth process, and its pattern, with special focus on sprawl and compact form of urban development. The book explains these two kinds of urban forms (sprawl and compact urban development) in detail regarding their advantages, disadvantages, indicators, assessment, modeling, implementation and their relationship with urban sustainability. It confirms that the proposed modeling approaches, geospatial data and GIS are very practical for

identifying urban growth, land use change patterns and their general trends in future. The analyses and modeling approaches presented in this book can be employed to guide the identification and measurements of the changes and growth likely to happen in urban areas. In addition, this book can be helpful for town planning and development in order to design urban areas in a compact form and eventually sustainable manner. This publication brings together the results of five national studies that were carried out in Canada, Hungary, Latvia, Singapore and the United States of America. The publication reviews the contribution of economic activities based on copyright and related rights to the creation of national value added, employment and trade in selected countries and broadens the scope of WIPO-led research on the economic aspects of copyright. The past ten years in South Africa has seen many changes in education - the creation of a single department of education; common examinations for all learners in public schools in the country, a new outcomes based education curriculum which was introduced to learners in the general education and training phase since 1998 and will be introduced to the further education and training phase from 2006. To evaluate the success of these changes South African researchers still use the indicator of student achievement. The matriculation examination is the visible, high profile and public performance indicator. Every year parents, learners, teachers, researchers, government officials, policymakers, and the general public get involved in the debate around the matric examination with the most frequently asked questions being - Did the pass rate go up? Are standards dropping? Are the results real or have they been manipulated? How is our education system doing? Are we meeting the development

goals? What should the matriculation examination of the future look like? participants from government (national and provincial),

The Fungal Community: Its Organization and Role in the Ecosystem, Third Edition addresses many of the questions related to the observations, characterizations, and functional attributes of fungal assemblages and their interaction with the environment and other organisms. This edition promotes awareness of the functional methods of classification over taxonomic methods, and approaches the concept of fungal communities from an ecological perspective, rather than from a fungicentric view. It has expanded to examine issues of global and local biodiversity, the problems associated with exotic species, and the debate concerning diversity and function. The third edition also focuses on current ecological discussions - diversity and function, scaling issues, disturbance, and invasive species - from a fungal perspective. In order to address these concepts, the book examines the appropriate techniques to identify fungi, calculate their abundance, determine their associations among themselves and other organisms, and measure their individual and community function. This book explains attempts to scale these measures from the microscopic cell level through local, landscape, and ecosystem levels. The totality of the ideas, methods, and results presented by the contributing authors points to the future direction of mycology.
