This volume is the published proceedings of selected papers from the IFAC Symposium, Boston, Massachusetts, 24-25 June 1991, where a forum was provided for the discussion of the latest advances and techniques in the education of control and systems engineers. Emerging technologies in this field, neural networks, fuzzy logic and symbolic computation are incorporated in the papers. Containing 35 papers, these proceedings provide a valuable reference source for anyone lecturing in this area, with many practical applications included. This book is a readable and enjoyable text designed to strengthen the problem-solving skills of undergraduate students. Re-reading today Tony Hadland's book "The Spaceframe Moultons" brings back what a splendid job he did in researching and describing those exciting events which led up to the birth of the Spaceframe Moulton.
