What main factors affect mammalian home range size and dynamics? To what extent do constraints on home range characteristics vary between the sexes? This book aims to address these issues by concentrating the authors' expertise and experience in studies of home ranges in general and focusing on their studies of black bears of the Pisgah Forest, North Carolina, in particular. The authors provide an overview of the black bears and methods for their study before discussing concepts of home range, developing predictive habitat quality models, addressing influences of food production on social organization and exploring the mating behaviour of male bears. A review and synthesis of existing information were used to develop a Habitat Suitability Index (HSI) model for the black bear (*Ursus americanus*). The model consolidates habitat use information into a framework appropriate for field application, and is scaled to produce an index between 0.0 (unsuitable habitat) and

1.0 (optimum habitat). HSI models are designed to be used with Habitat Evaluation Procedures previously developed by U.S. Fish and Wildlife Service. Colorado author Linda Masterson dispels myths, replaces fear with respect, and lays the foundation for improving human-black bear relations with an inside look at the fascinating world of these highly intelligent, adaptable and resourceful animals found in 41 U.S. states and every province in Canada. With over 900,000 black bears roaming North America today, people from Florida to British Columbia are encountering bears more often, and as a result, human-bear conflicts are on the rise. This guidebook to life in bear country is packed with a wealth of useful and often surprising information, and down-to-earth advice from bear experts all over the continent, along with real-life stories from wildlife managers, organizations and communities who've discovered creative, workable ways for people and bears to share space. - Understanding Black Bears and Their Behavior - Bear-Proofing Your Home - Safe Trash Stashing - Hiking, Camping & Playing in Bear Country - Birdfeeding, Bee-Keeping in Bear Country - Gardening, Orchards & Farming in Bear Country - Bear Behavior Modification - Avoiding Encounters & Attacks - Appendix: bear organizations, volunteer groups, state agencies, resources and index Case Studies from National Parks, wildlife sanctuaries and communities in Colorado, Pennsylvania, Florida, Tennessee, Washington, Nevada, California, Minnesota and Canada. This beautifully

illustrated and sensitive storybook is designed to be used therapeutically by professionals and caregivers supporting children with an untreatable illness. With gentle and colourful illustrations that can help children with fears and feelings, it tells the story of the final journey made by a Boy with a Bear, as the Boy says his goodbyes and comes to terms with his life-ending illness. In this bundle, it is accompanied by the Storybook Manual, a resource that has been designed to support practitioners and caregivers with practical and creative ideas on how to use illustrated storybooks therapeutically with children. Key features include: An inviting and sensitively written fairy tale, with a story and illustrations that have been specifically designed to support children going through difficult life-events A supporting manual that offers a range of prompts, ideas and activities to encourage children's imagination and creativity, develop confidence and emotional literacy as well as deepen engagement and understanding of storybooks. Downloadable worksheets to support the story and explore specific themes further This is an invaluable resource for all professionals looking to use stories and images therapeutically with children suffering from a life-ending illness. The resources can also be adapted for wider use with siblings and other family members. "The author's narrative and photographs follow the polar bear, the brown bear, the Asiatic black bear, and the American black bear through the four seasons of the year. The book is richly illustrated and informative about the biology,

ethology, and ecology of bears"-- Haynes manuals are written specifically for the do-it-yourselfer, yet are complete enough to be used by professional mechanics. Since 1960 Haynes has produced manuals written from hands-on experience based on a vehicle teardown with hundreds of photos and illustrations, making Haynes the world leader in automotive repair information.

Slaughtered along our highways, roadkill may be observed regularly, but aren't likely to be given much thought. Research scientists, animal rights activists, roadkill artists, writers, ethicists and lyricists, however, are increasingly sounding the alarm. They report that we are killing the very animals we love, and are driving many of them to the brink of extinction. Detailing the death and destruction of mammals, reptiles, amphibians, and insect pollinators, this study examines the ways in which we are thus jeopardizing our own futures.

Beginning in the Model T era, biologists counted the common carnage of the time--cottontails, woodchucks, and squirrels, mostly. That record-keeping continues today. Beyond the bleak statistics, zoologists are rerouting migratory paths of animals and are advocating for cat and dog companions. This book illuminates both our successes and failures in keeping animals out of harm's way and what those efforts reflect about ourselves and our capacity to care enough to alter the road ahead. A price guide for collectors of Boyd Resin bears and other creatures. The Second Edition is 50% larger than the first. Contains the latest secondary market pricing,

Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle. In his 1998 book Consilience, E.O. Wilson set forth the idea that integrating knowledge and insights from across the spectrum of human study -- the humanities, social science, and natural sciences -- is the key to solving complex environmental and social problems. Experiments in Consilience tells the unique story of a pathbreaking effort to apply this theoretical construct in a real-world

setting. The book describes the work of the Biodiversity Research Network, a team of experts from the United States and Canada brought together to build interdisciplinary connections and stimulate an exchange of expertise. Team members sought to understand the ecology and population dynamics of key species in particular ecosystems, to understand the impact of human populations on those species and ecosystems, and to develop tools and processes for involving a greater variety of stakeholders in conservation efforts. In order to keep the experiment grounded, the network focused on a single type of conservation planning workshop run by a single organization -- the Population and Habitat Viability Assessment Workshop (PHVA) of the IUCN-sponsored Conservation Breeding Specialist Group (CBSG). The book combines sections on the theoretical underpinnings of relevant concepts in population biology, simulation modeling, and social science with detailed descriptions of six PHVA workshops conducted on different species across four continents. A concluding chapter examines the lessons learned, which have application to both theory and practice, including reflections on interdisciplinarity, integrated risk assessment, and future directions for research and action. Through the combination of theory and application, combined with frank discussions of what the research network learned -- including both successes and failures -- the book offers fresh ideas on how to improve on-the-ground conservation decisionmaking. Experiments in Consilience

offers a one-of-a-kind overview and introduction to the challenges of cross-disciplinary analysis as well as cross-functional, cross-disciplinary and cross-sectoral action. It centers on the problem of conserving endangered species while telling the story of a new form of organizing for effective risk assessment, recommendation, and action. Bears have fascinated people since ancient times. The relationship between bears and humans dates back thousands of years, during which time we have also competed with bears for shelter and food. In modern times, bears have come under pressure through encroachment on their habitats, climate change, and illegal trade in their body parts, including the Asian bear bile market. The IUCN lists six bears as vulnerable or endangered, and even the least concern species, such as the brown bear, are at risk of extirpation in certain countries. The poaching and international trade of these most threatened populations are prohibited, but still ongoing. Covering all bears species worldwide, this beautifully illustrated volume brings together the contributions of 200 international bear experts on the ecology, conservation status, and management of the Ursidae family. It reveals the fascinating long history of interactions between humans and bears and the threats affecting these charismatic species.
