In Revolution in Texas, Benjamin Johnson tells the little-known story of one of the most intense and protracted episodes of racial violence in United States history. In 1915, against the backdrop of the Mexican Revolution, the uprising that would become known as the Plan de San Diego began with a series of raids by ethnic Mexicans on ranches and railroads. Local violence quickly erupted into a regional rebellion. In response, vigilante groups and the Texas Rangers staged an even bloodier counterinsurgency, culminating in forcible relocations and mass executions. eventually collapsed. But, as Johnson demonstrates, the rebellion resonated for decades in American history. Convinced of the futility of using force to protect themselves against racial discrimination and economic oppression, many Mexican Americans elected to seek protection as American citizens with equal access to rights and protections under the US Constitution. Today's manufacturing environment is characterised by significant change in the way it is able to respond to its business objectives. Companies now face new challenges to meet customer demands including greater flexibility, a wider range of products, higher quality, improved lead time, whilst maintaining competitive prices. The changes manifest in each company will differ but, the trend is towards providing a leaner, more responsive organisation. This is reflected in the need for Information Technology (IT) systems to be more integrated across an enterprise and for the systems to be provided on a distributed basis. At the same time it is imperative that the costs associated with these IT systems and the range of skills required by an enterprise to develop and support such systems should be minimal. One way of achieving this objective is to adopt the use of standards. During recent years there has been a lot of activity to standardise the way that manufacturing devices communicate with each other. Considerable progress has been made, thanks not least to the success of the international effort of standardisation bodies like ISO, IEEE and IEC, and projects applying standardised protocols like Manufacturing Automation Protocol (MAP), in the USA, Communications Network for Manufacturing Applications (CNMA) in Europe and not forgetting Mini-MAP and Fieldbus technology. Ranaviruses and other viruses within the family Iridoviridae, infect a wide range of ecologically and commercially important ectothermic vertebrates, i.e., bony fish, amphibians, and reptiles, and invertebrates, including agricultural and medical pests and cultured shrimp and crayfish, and are responsible for considerable morbidity and mortality. Understanding the impact of these various agents on diverse host species requires the combined efforts of ecologists, veterinarians, pathologists, comparative immunologists and molecular virologists. Unfortunately, investigators involved in these studies often work in discipline-specific silos that preclude interaction with others whose insights and approaches are required to comprehensively address problems related to ranavirus/iridovirus disease. Our intent here is to breakdown these silos and provide a forum where diverse researchers with a common interest in ranavirus/iridovirus biology can profitably interact. As a colleague once quipped, "Three people make a genius." We are hoping to do something along those lines by presenting a collection of research articles dealing with issues of anti-viral immunity, identification of a potentially novel viral genus exemplified by erythrocytic necrosis virus, viral inhibition of innate immunity, identification of novel hosts for lymphocystivirus and invertebrate iridoviruses, and modelling studies of ranavirus transmission. Collectively these and others will exemplify the breadth of ongoing studies focused on this virus family. Tathagatagarbha -- Buddha Nature -- is a central concept of Mahayana Buddhism crucial to all the living practice traditions of Tibetan and Zen Buddhism. Its relationship to the concept of emptiness has been a subject of controversy for seven hundred years. Dr. Hookam's work investigates the divergent interpretations of these concepts and the way the Tibetan tradition is resolving them. In particular she does this with reference to the only surviving Indian commentary on the Tathagatagarbha doctrine, the Ratnagotravibhaga. This text addresses itself directly to the issue of how to relate the doctrine of emptiness (the illusory nature of the world) to that of the truly existing, changeless Absolute (the Buddha Nature). This is the first work by a Western writer to present an analysis of the Shentong tradition based on previously untranslated sources. The Shentong view rests on meditative experience that is inaccessible to the conceptualizing mind. It is deeply rooted in the sutra tradition of Indian Buddhism and is central to an understanding of the Mahamudra and Dzogchen traditions and Tantric practice among Kagyupas and Hyingmapas. This is the second volume of three designed to give an insight into the current state of CNC technology with a focus on practical applications. Following a brief historical introduction to cutting tool development, chapters 1 and 2 explain why CNC requires a change in cutting tool technology from conventional methods. A presentation is given of the working knowledge of cutting tools and cutting fluids which is needed to make optimal use of the productive capacity of CNC machines. Since an important consideration for any machine tool is how one can locate and restrain the workpiece in the correct orientation and with the minimum of set-up time, chapter 3 is concerned with workholding technology. The author draws on his extensive experience as a practitioner and teacher. The text is thoroughly practical in character and generously illustrated with diagrams and photographs. Scholarship on Maya healing traditions has focused primarily on the roles of midwives, shamans, herbalists, and diviners. Bonesetters, on the other hand, have been largely excluded from conversations about traditional health practitioners and community health resources. Maya Bonesetters is the first book-length study of bonesetting in Guatemala and situates the manual healing tradition within the current cultural context—one in which a changing medical landscape potentially threatens bonesetters' work yet presents an opportunity to strengthen its relevance. Drawing on extensive field research in highland Guatemala, Servando Z. Hinojosa introduces readers to a seldom documented, though nonetheless widespread, variety of healer. This book examines the work of Kaqchikel and Tz'utujil Maya bonesetters, analyzes how they diagnose and treat injuries, and contrasts the empirical and sacred approaches of various healers. Hinojosa shows how bonesetters are carefully adapting certain biomedical technologies to meet local expectations for care and concludes that, despite pressures and criticisms from the biomedical community, bonesetting remains culturally meaningful and vital to Maya people, even if its future remains uncertain.
