The easy-to-use guide to interpreting candlestick charts and derivative markets Candlestick charts are an effective way of visualizing price movements and, due to the increased interest in the complex derivatives market, they are being used more and more widely. A combination of a line-chart and a bar-chart, where each bar represents the range of price movement over a given time interval, candlestick charts are most often used in technical analysis of equity and currency price patterns. A guide to the most used charts, The Candlestick Glossary is arranged in an easy-to-use manner, providing a quick reference for those new to the field. Candlestick charts are formed with the help of the opening, high, low, and closing price of the day—if the opening price is above the closing price then a filled candlestick is drawn, and these charts are visual aids for decision making in forex, stock, commodities, and options trading. Contains alphabetical explanations of over 200 candlestick and related terms Includes daily charts of 50 companies, and six-month charts for comparative explanations of candlesticks with Western-style technical indicators Written by Michael C. Thomsett, author of over sixty books and hundreds of articles, including the bestselling Getting Started in Bonds, also published by Wiley A practical and concise resource for anyone new to this way of representing derivatives, The Candlestick Glossary presents sometimes confusing concepts in a format that is easy to understand and digest. That is simple 'hindsight', and is always 20/20!This book is different! It is IN-DEPTH – EXPLAINED and you WILL learn price movements and technical analysis from this information!You will understand and recognize tops and bottoms in the market and in particular stocks, AS they are forming. This is highly valuable information, and you should NEVER attempt to trade or invest without this knowledge!Mutual Funds? Most people think they do not need this information because the have a Mutual Fund. That could not be farther from the truth. Depending on the time frame of the chart, each candlestick consists of minutes, a day, a week or a month trading range. On an intraday chart, a candle might represent periods of time like 1-minute, 5-minutes, 15-minutes or one hour. A daily shows candles that represent each day's trading range. A weekly chart shows candles that represent each week's trading range. A monthly chart shows candles that represent each month's trading range. Note that during the day, a daily candle will change as the range changes and price reaches a final, closing price. Similarly, during the week and in the middle of the month, the candles in those time frames are still changing and are not finalized until their time frame closes. At the end of the day, week or month, the candle for that time period is finalized. A candlestick consists of the body with an upper or lower wick or shadow. Most candlestick charts show a higher close than the open as either a green or white candle. The opening price as the bottom of the candle and the closing price as the high of the candle. Also, most candlestick charts show a lower close than the open represented as a red or black candle, with the opening price as the top of the candle body and the closing price as the low of the candle body. ...and much more! By the time you finish this book, I think you'll agree that candlesticks are the best type of charts for most traders to use for trading price action patterns.
