Comprehensive in scope, the 6-volume Plastic Surgery, 4th edition returns as the ultimate knowledge source in this most challenging of surgical specialties. It's been completely revised to meet the demands of the trainee and practicing plastic surgeon, featuring brand-new color clinical photos, procedural videos, and video lectures across all six volumes. Bonus material that includes additional text, images, and videos helps you improve your mastery of the latest techniques. "Function is the focus of any hand surgery, a frequently performed procedure by reconstructive plastic surgeons. The topics in this volume of Clinics in Plastic Surgery work their way through soft tissue procedures of the fingers and hand through the upper arm. The more common conditions and commonly performed surgeries are presented here along with the more difficult and complicated procedures. Topics include: Current practice of soft tissue repair of fingertip; Microsurgical soft tissue and bone transfers in complex hand trauma; Full cosmetic reconstruction of the digits by composite tissue grafting; Methods, pitfalls, and common mistakes in treatment of fractures in the digits; Venous flap and freestyle free flap in hand surgery; Management of

pain in peripheral nerves; Technical difficulties of surgical treatment and salvage of treatment failure in Dupuytren's disease; Surgical treatment of cubital tunnel syndrome; Distal radius fracture: indications, treatment, controversies; Repair, autografts, conduits, and allografts for digital and forearm nerves: current guidelines. Two experts renowned in hand surgery lead this issue - Dr Michael Neumeister and Dr Jin Bo Tang. Provides an easy reference aid for those involved in the field of Plastic Surgery. Plastic surgery is a large and diverse field and therefore this book would serve as a framework or skeleton on which to base answers to questions relating to the individual components of the topic. It would be useful to students of the specialty in addition to those involved in teaching. Provides definitions: a particularly helpful way to engage in answering a question.- Provides classifications: neatly distills a large topic into a manageable framework.- Provides references of recognised classifications: a question often asked of trainees on a variety of topics.- Provides simple diagrams: often asked to draw sketches by trainers and patients.- Succinct: removes excessive padding and provides a sound backbone of knowledge without the reader having to painfully extract information from an elaborate text. Certain chapters of the book would appeal to a range of surgeons not only plastic surgeons but those involved in orthopaedics, hand surgery, urology, maxillofacial and craniofacial specialties. The incorporation of a medicolegal chapter significantly widens readership across the medical specialties and perhaps into the legal sphere. (The author has a degree in Medical Law in addition to Medicine). Certain chapters would also be of interest to other professions allied to medicine e.g. plastic surgery specialist nurses, occupational therapists, speech therapists with an interest in cleft. While every facial plastic surgeon is trained in hair restoration, unless one does it frequently in practice, there are techniques, tips, and approaches to be learned from experts in this field who focus solely on hair transplantation and restoration. Techniques, Complications, Medical Treatment, and Medical Diagnosis are covered for Donor Harvesting and Management of the Donor Site; Hairline Design and Frontal Hairline Restoration; Management of Advanced Hair Loss Patterns; Repair of the Unsuccessful Hair Restoration; Tissue Expansion for Scalp Reconstruction; Imposters of Androgenetic Alopecia: Diagnostic Pearls for the Hair Restoration Surgeon; and more. This clinically focused information is intended for the facial plastic surgeon whose practice is not a majority of hair restoration and for surgeons who might want to grow their hair practice. Editors Raymond Konior and Steven Gabel lead this review in Facial Plastic Surgery Clinics. When asked why hair transplantation and restoration is of compelling interest, Dr Konior explains that he decided to limit his practice solely to hair restoration because it is a life altering procedure for patients: "People cannot believe the outcome - they come to me post-restoration and are so happy with their new appearance, telling me how much their lives are changed. Whether for job or career or personal reasons, this procedure has a positive outcome for them. This issue of Facial Plastic Surgery Clinics, guest edited by Dr. Sam P. Clinical Problems in Medicine and Surgery is a departure from traditional medical textbooks in that it deals with the real problems of clinical medicine through scenarios encountered in the emergency department, on the wards and in outpatient clinics. First published in 1992, the book has found great popularity with medical students, residents and interns about to experience, or already experiencing, the real world of medical practice. The book comprises 55 real-life medical scenarios to illustrate important everyday principles in clinical medicine. For this new Third Edition the successful format of case presentation, interspersed with questions and answers, and a final synopsis of key material, has been retained, while new cases have been added and the many useful web-links updated. With the assistance of expert colleagues across three continents, each problem has been revised and updated. New images have been added which reflect the extensive changes in the field of minimally invasive diagnostics. Searching questions will guide the reader towards further self-directed learning. This book does not purport to be an exhaustive text on clinical medicine. Nor is it a replacement for real-life clinical experience and the hands-on teaching of expert clinicians. It is designed rather as a wide-ranging source of information and a practical aid to the management of clinical problems. The authors hope it will instil in the reader a real sense of excitement and curiosity towards further learning.

- A highly praised book that tackles important medical and surgical topics from a problem-oriented angle.
- Adopts a case scenario approach which will encourage critical thinking and develop problem-solving skills.
- The cases cover all common and important problems likely to face the newly-qualified doctor in the casualty department, on the wards or in the clinic.
- The questions although set in the context of the case are designed to test the reader's overall understanding of the most relevant aspects of each topic.
- Well-illustrated with clinical photographs, pathological images and radiological scans and x-rays. Several new cases cover topics such as secondary hypertension, urosepsis and stroke. Searching questions have been added to guide the reader towards further self-directed learning. New imaging reflects the extensive changes in the field of minimally invasive diagnostics.
